Villari disrupts the steel structure inspection market through offering the first continuous datadriven sensor technology

Providing continuous, datadriven insights of damage accumulation in critical structural details

Villari delivers sensors probes that detect tiny crack growth in steel structures using variations in the magnetic field

Information Classification: General

The technology is based on passive magnetic flux leakage due to geometric and inverse magnetostrictive effects

Equipment Service Life/Fatigue

nformation Classification: General

Itom Load Spectrum

Lattice Crane girder
